### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1742

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, drawn to a method of surface densification of a sintered body, classified in class 419, subclass 28.
  - II. Claims 4-21, drawn to a surface densified sintered article, classified in class 75, subclass 228.

1. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product can be made by pressing a non-rotational tool into the surface.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. During a telephone conversation with Jeffrey Thurnau on 7 March 2005 a provisional election was made without traverse to prosecute the invention of I, claims 1-3. Affirmation of this election must be made by applicant in replying to this Office action.

Art Unit: 1742

Claims 4-21 are withdrawn from further consideration by the examiner, 37

CFR 1.142(b), as being drawn to a non-elected invention.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Buckley-Golder et al. (B-G et al.).

B-G et al. discloses a method of surface densifying a sintered part comprising:

providing a sintered body formed by preparing powder, pressing powder in a die, removing the pressed powder, and sintering the pressed powder to form a sintered body (col. 5, lines 38-45).

B-G et al. further discloses to surface densify said sintered body by rotating said part against a tool (col. 3, lines 20-25).

B-G et al. further discloses wherein the tool forms ribs in the sintered body (see Fig. 4).

B-G et al. further discloses wherein the inside of a sintered body can be surface densified by the same method (col. 5, lines 1-10).
